## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claimed sequencing means must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The abstract of the disclosure is objected to because it reads like a claim containing legal terms such as means. Correction is required. See MPEP § 608.01(b). It is noted that a clean version of the abstract is not provided.

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The

abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1, 7, 8 & 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a. Claim 1 recites the limitation "said signal" in line 4. There is insufficient antecedent basis for this limitation in the claim. In lines 5 – 6 it is not clear what signal "the same carrier frequency signal" is referring to. It seems that the same carrier frequency is used for transmission and reception.

b. In claims 7 & 8, line 2, "said" should be deleted.

c. In claim 21, the text in lines 4 – 7 is confusing since it appears that the means for transmitting transmits signals to the receiving means of the same station via an antenna.

***Allowable Subject Matter***

6. The indicated allowability of claim 22 is withdrawn in view of the newly discovered reference(s) to Gilbert et al. (USPN 6,016,311). Rejections based on the newly cited reference(s) follow.

***Claim Rejections - 35 USC § 102***

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

7. Claim 22 is rejected under 35 U.S.C. 102(e) as being anticipated by Gilbert et al. (USPN 6,016,311). In Fig.3B, Gilbert discloses a frame N of a transmission signal wherein the length of the uplink N21 and/or N22 and downlink N1 sections can be adapted to suit the needed transmission needs. The claimed time segments with successive random positions read on timeslot groups N1, N21 & N22. The claimed return signal reads on N21 and/or N22. See col. 8, lines 48 – 65.

8. Claims 1 - 21 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
